

Warning: This is a major spoiler that will ruin the surprise/enjoyment for you. Do NOT read it if you want a real challenge with surprises.

The Dump:

Map statistics:

- Nothing special, except for two exits leading to other sub-zones.

Monsters that spawn on the map:

- Otyughs
- Mustard Jellies
- Carrion Crawlers
- Umber Hulk
- Margoyles (4 apr, magic weapon to hit)
- Ettins

Advice for players:

- The map is vast, and the proliferator monsters an exponentials: find them before you're overwhelmed.
- Otyughs cause disease, mustard jellies slow you down, carrion crawlers paralyze you, and umber hulk confuse you. Make sure you have solutions or immunities for all of these.
- The boss has a chance to dispel and kill on every attack. Send in your tanks with good saving throws.

Unique:

Potemkin Jack the Stinking: (Fallen Planetar)

- Antediluvian
- Stinking cloud when hit
- Planetar weapon with a 25% chance to dispel 100% and kill (save roll at -2 to avoid) + cast Contagion
- Regenerates 6 HP per round

Sub-boss 1: Rex, Neo otyugh

- Ancient
- Enraged
- Improved Haste
- Inflicts a deadly disease (RP: like 20% of otyughs) (1 HP/2 sec, duration 270) (3x damage & duration of a normal otyugh)

Sub-boss 2: Roxxie, Rex's companion, Neo otyugh

- Ancient
- Psychic
- Haste

The Silent Necropolis:

Map statistics:

- Every 1D4 rounds, each ally must succeed on a saving throw against spells or be silenced for 3 rounds.
- You need to find the key to unlock the door leading to the boss.

Monsters that spawn on the map:

- Skeleton Archers
- Skeleton Warriors
- Ghouls
- Wights
- Vampires
- Spectres

Advice for players:

- The ghouls paralyzes, vampires, ghouls, and spectres drain levels. The boss and its minions petrify. Make sure you have countermeasures or immunities against these effects.

Unique:

Ugloril, the Medusa Queen: (Spectral Medusa)

- Spectral (immunity to non-magical weapons and cold)
- Melee Backlash (short range): snakes -> lethal poison (saving throw against death) and one level drained without a saving throw
- “Psychic” (area-of-effect) petrifying gaze (saving throw against petrification) and one level drained without a saving throw

Sub-boss 1: 4x Ugloril's Servants, Spectral Medusas

- Spectral (immunity to non-magical weapons and cold)
- Melee Backlash (short range): snakes -> lethal poison (saving throw against death) and one level drained without a saving throw
- Petrifying gaze (saving throw against petrification) and one level drained without a saving throw

Sub-boss 2: 5x Guard Wraith-Spiders, Wraith-Spiders

- Random
- On hit, drains 1 Strength point (saving throw) and one level without a saving throw

The Vegetable Labyrinth:

Map statistics:

- Every 5 rounds, a portal appears at a random location on the map for 5 rounds, accompanied by 1D3 random carrion crawlers. Going through the portal leads to the boss.
- Every 1D4 rounds each ally must succeed on a saving throw against spells with a -2 penalty or be entangled for 2 rounds.

Monsters that spawn on the map:

- Grizzlys
- Sword Spiders
- Trolls
- Basilisks (20% are Greater)
- Wyverns
- Shambling Mounds
- + Carrion Crawlers (brought by the portal and around the boss)

Advice for players:

- Prepare countermeasures against petrifying basilisks and quickly locate the proliferating spiders and wyverns.
- The portal leading to the boss is hard to intercept and only lets one person through per interaction (you can interact with it multiple times before it moves), and whoever ends up in the boss room is swamped by paralyzing carrion crawlers. Send someone with free action who can handle a large group of monsters.
- Note: When a character enters a portal and is teleported, he disappears from the screen. Quickly pause the game and click on his portrait to find him.
- Here's a tip for easily finding the portal: if you have cheats enabled, open the map and press CTRL to display the monsters (green circles); if you see a group of 3–4 small green squares, that's the portal (along with its carrion Crawlers).

Unique:

The mother of crawlers:

- Placed in a default inaccessible area (reachable via the random portal)
- Immune to acid
- Immune to spells of levels 1 through 3
- Every 3 rounds, spawns 1D3 random carrion crawlers
- When hit, cast Absolute Immunity. (once only)
- Acidic backlash
- Corrosive, paralyzing (saves at -4) bite that slices creatures with less than 60 HP in half (killing them) (saves at -4).

The Steel Tombs:

Map statistics:

- Every round, a Cloudkill appears at a random location.
- The map has two loops; each exit leads to another exit, so it's easy to escape from monsters.
- There are 4 Royal Mummies placed on the map. Once all 4 are defeated, the boss appears somewhere.

Monsters that spawn on the map:

- Mummies
 - Skeleton Warriors
 - Bone Golems
 - Spectral Wizards
 - Helmed Horrors
 - Iron Golems
- + 4 Royal Mummies (Sub-boss)

Advice for players:

- Hardened iron golems require a +4 weapon to be hit.
- The final boss is a nightmare for melee fighters and cannot be targeted by mages (due to permanent invisibility). Your best strategy, therefore, is to use tanks and ranged attackers, with your mages casting buff spells or party friendly area-of-effect spells: Insect Plague, Chain Lightning, Horrid Wilting, Dragon's Breath?

Unique:

Boss: Ragewind (after the death of the four royal mummies)

- Undead
- Improved Invisibility
- Improved Haste (6 APR)
- Immunity to non-magical and magical weapons up to +2
- Damage resistance 70% (+10% from one of its weapons)
- Magic Resistance 50%
- Detect Invisibility
- Blade Barrier 6d6 (saves for ½)

The Maze:

Map statistics:

- Fully revealed from the start (it is concave, so completely visible)
- There are three “immortal” Raging Renders hunting you down in the maze.
- In the central area, each round triggers an acid explosion: 4.5-meter radius, 4d4 acid damage (saving throw against spells with a -3 penalty for half damage) + forces a saving throw against spells or causes 1 round of stun.
- Each acid explosion has a 16% chance of spawning an Acid Paraelemental (non-random).
- Each portal leads to the one opposite it and has a 25% chance of spawning a Portal Guardian (Invisible Servant, non-random) when you try to pass through it or arrive at it. The portal that has nothing opposite it leads to the central area.

Monsters that spawn on the map:

- Mind Flayers (20% are Ullitarids)
 - Beholders
 - Gauths
 - Ocularons (+3 weapons to hit, immune to bludgeoning and acid damage, true sight; when it hits, the target must make a saving throw against breath attacks or being blinded; its poison-swollen eyes pop out and explode into a cloud of poison; when the Ocularon dies, a cloud of poison is released)
 - Otyughs
- + Acid Paraelementals (generated at the center)
- + Portal Guardians (when using a portal)

Advice for players:

- Mind Flayers and Beholders together, and nowhere to hide. You’re going to have to rethink your strategy.
- A good way to avoid the Raging Renders is to wait for them near a portal, let them come, and go through the portal. The portal guardian will always be less of a hassle than those three horrors.
- Hardened Ocularons require a +5 non-blunt weapon. Or kill them with spells.
- There are no boss to defeat. All you have to do is survive for 10 minutes.

Unique:

3x Raging Renders:

- Improved Haste (6 APR; base RP movement: 30)
- Regenerates 6 hit points per round
- Damage: 2D10 + Strength bonus (19), 25% chance to deal double damage and kill the target (saving throw against death).
- Immunity to poison, mental effects, level drain, death effects, and petrification
- If it is killed, it is respawned in the center of the area after 1D4+2 rounds.

Antimaginium:

Map statistics:

- Each round, every ally suffer a 20% chance of miscasting spells and must pass a saving throw against spells with a -2 penalty; otherwise, the chance of miscasting increases to 100%.
- Watch out for the many traps!
- The central altar can be activated to teleport the user (one person per use) to a random location; there is a 1 in 9 chance of being teleported to the boss's no-exit area.

Monsters that spawn on the map:

- Nishrus
- Vortex spiders
- Sojourner Shockers (magic weapon to hit, electric barrier, attack with Chain Lightning 6D10 which costs him 8 HP) (yes, you can let him launch his attacks, and he eventually disappears on his own)
- Magic Golem (Immunity to magic and magical weapons; its attack drains 1 spell and 1 charge)
- Antimagic Quasielemental (Immunity to magic and magical weapons; attacks with 4 magic missiles that dispel magic upon contact)

Advice for players:

- The challenge will be MUCH easier if your heroes are immune to electricity.
- Magic golems and antimagic quasielemental are immune to magical weapons. Be sure to equip your heroes with non-magical secondary weapons.
- The boss area has no exit: heroes who are teleported there cannot leave unless they use the Exit rune.
- The boss disintegrates and drains levels. It can only be damaged by bludgeoning weapons, electrical damage, and magical damage: keep that in mind when choosing the first character to send in.

Unique:

Living Black Blade of Disaster: (+5 Animated Sword)

- 4 APR
- Each hit disintegrates the target if it fails a saving throw against death with a +4 bonus
- Each hit has a 10% chance to drain 4 levels from the target and restore 20 hit points to the Black Blade
- Immune to non-magical weapons
- Immune to fire, cold, and acid
- Immune to slashing and piercing weapons
- Resistance to bludgeoning weapons: 70%, to electricity: 70%, to magic and magical damage: 30%
- Immune to mind effects, death effects, intelligence drain, level drain, poison, disease, paralysis, and many other things.

The Furnace:

Map statistics:

- Characters take 1D3 fire damage per round. A 100% fire resistance completely protects against this penalty (and allows spellcasting).
- All traps generate a cloud of fire.
- The two exits are connected: each leads to the other.

Monsters that spawn on the map:

- Efreets (20% are noble)
- Salamanders (20% are noble)
- Greater Fire Elemental
- Magma Para-Elemental (its attack burns the target for 3 rounds)
- Fire Giant

Advice for players:

- The challenge will be MUCH easier if your heroes are immune to fire. This is especially true for your warriors when fighting the boss and for your mages so they can cast spells.

Unique:

The Charreder: (Special Iron Golem)

- Iron Golem immunities
- Fire resistance 60%, cold, electricity, and acid resistances 35%
- Magic resistance 90%
- Fire Aura: Each round, deals 2D6 (6D6+1) fire damage to anything within a 2.5-meter radius
- Backlash against the attacker: 2D6 (6D6+1) fire damage + 15% chance to generate a fire spawn (small fire elemental with 7 HP)
- 3 APR with his weapon: 2D6 slashing damage (+ Strength bonus) + 2D6 (6D6+1) fire damage
- Requires a +3 weapon to hit
- Through its equipment: +240 hit points, +220% fire damage dealt (all 2D6 rolls become 6D6+1)

The Forge:

Map statistics:

- A portal in one corner of the area leads to the boss
- The “path” to the portal is guarded by two Greater Ironwyrn Golem, each of which casts a fireball (15D6, spell save for half damage) every round. You don’t have to kill them to get through.
- Every 5 rounds, a new random golem appears, emerging from the portal toward the boss. If the boss is dead, the flow stops. The longer it takes you to reach the portal, the more heavily guarded it will be.
- The ovens beneath the dracosphere golems deal 1D3+2 points of fire damage every second

Monsters that spawn on the map: __

- Stone Golem
- Gargoyle Golem (special stone golem, 75% chance to petrify on contact; save against petrification to avoid)
- Mechanical Golem (every 3 rounds, releases an electric shock around itself: 3D6 electricity damage (save against breath attacks for half damage). When it scores a critical hit while attacking: 6D6 electricity (spell save for half damage) and a save against paralysis or stun for 1D4+2 rounds. When it is hit: 5% chance of the same effects as the critical hit on the attacker.
- Iron Golem (20% made of adamantite)
- Arachnogolem (magic weapon on hit, 4 APR, poison on hit (save to avoid), web every 1D4 rounds)
- 2x Greater Ironwyrn Golem (non-random) (15D6 Fireball every round, 125% fire resistance, 100% acid resistance, 50% cold resistance, 20% physical damage resistance, regenerates 1 HP/second (based on its placement on the oven))

Unique :

The Blacksmith:

- Cannot be attacked in melee
- 250 hit points
- 125% resistance to fire
- 70% resistance to other elements and magical damage
- 90% resistance to magic and physical damage
- All saving throws set to 1
- Does not attack but creates a random golem (the same as those on the map) every 5 rounds at a random location on the map.
- Accompanied by 5 random golems already in the area.
